密碼檢測(使用物件陣列(Object array)

1. Label 2. PasswordField(密碼欄位)

密碼檢測(使用物件陣列(Object array) (Cont.)

6.在 class 名稱下方加入下列程式碼

```
public class HW09View extends FrameView {
   int h = 4, w = 3;
   javax.swing.JButton[][] gBtn = new javax.swing.JButton[h][w];
   String passStr = "23323456";
```

7. 在 initComponents(); 指令下方加入下列程式碼

```
31
              ¡Panel1.setLayout(new java.awt.GridLayout(h,w));
              int count=9;
32
              for(int i=0; i< h-1; i++){}
                  for(int j=0; j < w; j++){
                      gBtn[i][i] = new javax.swing.JButton(String.valueOf(count--));
                      gBtn[i][i].addActionListener(new java.awt.event.ActionListener() {
                          public void actionPerformed(java.awt.event.ActionEvent evt) {
                              gBtnActionPerformed(evt);
39
40
                      });
                      jPanel1.add(gBtn[i][j]);
42
             gBtn[3][0] = new javax.swing.JButton("0");
```

密碼檢測(使用物件陣列(Object array) (Cont.)

8. 接續在步驟7加入下列程式碼

```
gBtn[3][0].addActionListener(new java.awt.event.ActionListener() {
45 🖨
                 public void actionPerformed(java.awt.event.ActionEvent evt) {
                      gBtnActionPerformed(evt);
49
              });
             jPanel1.add(gBtn[3][0]);
50
              gBtn[3][1] = new javax.swing.JButton("登入");
51
              gBtn[3][1].addActionListener(new java.awt.event.ActionListener() {
                 public void actionPerformed(java.awt.event.ActionEvent evt) {
                      gBtnActionPerformed(evt);
55
56
              });
57
              jPanel1.add(gBtn[3][1]);
              gBtn[3][2] = new javax.swing.JButton("離開");
58
              gBtn[3][2].addActionListener(new java.awt.event.ActionListener() {
                 public void actionPerformed(java.awt.event.ActionEvent evt) {
                      gBtnActionPerformed(evt);
62
63
              });
64
              jPanel1.add(gBtn[3][2]);
```

密碼檢測(使用物件陣列(Object array) (Cont.)

```
private void gBtnActionPerformed(java.awt.event.ActionEvent evt) {
130
131
              int i=0, j=0;
132
             boolean flag = true;
                                                              9. 在 public void showAboutBox()方法之後
              while((i<h) && flag){
133
                                                              加入gBtnActionPerformed 方法程式碼
134
                  if (evt.getSource()==gBtn[i][i]){
135
                      flag = false;
136
                      if((i==3) && (i==2)){// 離開
137
                          System.exit(0):
138
                      }else{
                         if((i==3) && (j==1)){ // 登入
139
                              char[] pass1 = jPasswordField1.getPassword();
140
141
                             String passStr2 = new String(pass1);
                             if(passStr2.equals(passStr)){
142
                                 javax.swing.JOptionPane.showMessageDialog(null, "Correct");
143
144
                              }else{
                                 javax.swing.JOptionPane.showMessageDialog(null, "InCorrect");
145
146
147
148
                          else{
149
                             iPasswordField1.setText(String.copyValueOf(iPasswordField1.getPassword())+gBtn[i][j].getText());
150
151
                  }else{
152
153
                      j++;
154
                      if(j==w){
155
                          j=0;
156
                          i++:
157
158
159
160
```
